Funds and Grants Supporting Public Charging Infrastructure

The UK:

Multiple funds and grants have been in place in the country to support the growth of the public charging infrastructure, including:

- 950 Million pounds sterling(1 GBP=1.26 USD) in funding for the installation of high-power chargers at motorways from 2021-2025.
- On-street Residential Chargers Scheme (OCSR): The grant funds up to 75% of the charger hardware and installation cost to Local Authorities.

Germany:

- The German government announced funding of 6.3 Billion euros (1 Euro=1.08 USD) for the rapid deployment of chargers in the next 3 years.
- The EU approved subsidized deployment of 8,500 charging points in the country with a funding of 1.8 Billion euros.

France:

- Multiple Advenir program fundings are ongoing in the country to support the deployment of public charging infrastructure, including the coverage of up to 60% of charger cost installing on roads.

The Netherlands:

- In the Netherlands, people without access to private driveways can ask the local authorities to install a free charging point near their premises.
